The Nuhn Header Series Pumps are the smoothest and strongest pumps on the market. They make mixing and transferring manure fast and efficient. Our ‘keep it simple and rugged’ design concept means that you can expect years of reliable service. The enclosed bearing system protects components from corrosive manure, to ensure the pump is always performing at its best.

Most Efficient and Highest Volume Pump on the Market

The Nuhn Header Series Pumps are the smoothest and strongest pumps on the market. They make mixing and transferring manure fast and efficient. Our ‘keep it simple and rugged’ design concept means that you can expect years of reliable service. The enclosed bearing system protects components from corrosive manure, to ensure the pump is always performing at its best.

Unsurpassed Power and Performance

The 4” nozzle creates a powerful 45 psi of pressure and 4500 gallon / minute volume.

Flow vs. Hp

7000 gal / min @ 150 Hp
5500 gal / min @ 95 Hp

A Family Business Since 1902
TRIPLE PORTED, LOFTED HOUSING
• Having the liquid leave the housing in three spots allows for a narrow, large diameter fan that increases the velocity of the liquid, and reduces the amount of input power.
• The triple exit points also reduce side thrust on the bottom bearings, increasing seal and bearing life.

MASSIVE AGITATION CAPACITY
• 4” nozzle for 45 psi of pressure and 4000 gal / min volume
• End nozzle rotates 360°
• Main rotation pipe can move 300°

RADIO CONTROL
• 300+ ft range
• Switch from “agitate” to “fill” without leaving the cab of the tractor

TAPERED FAN
• Angled fan directs liquid up as well as out while liquid is still spinning in housing

HEAVY LIFT UNDERCARRIAGE

HEAVY COMMERCIAL OUTRIGGERS

OPTIONS
• WALL WALKER
• STEERING
• ADDITIONAL RADIO REMOTE
• VARI-FLOW AGITATOR

The Nuhn Lagoon Pump features easy to access bottom bearings, and easily replaceable parts. It is low maintenance because the massive bottom bearings in the pump are enclosed in a pressurized grease bath, and protected by six Viton seals. The pressure of the grease flushes the seals of any sand or grit resulting in extended bearing life.

The modular design allows for easy maintenance and longevity of the pump components.
